

RESTORE THE BRICKWORK OF YOUR HOUSE AND GARDEN WALLS THE PURPLE WELLIES WAY!

1

We'll begin with a thorough assessment of the surface and mix a special batch of cleaning solution that is unique for your brickwork.

The batch we produce will be created depending on the build-up of organic growth, staining or salt content to ensure a safe and effective removal of all contaminants.

2

The formula is applied to the surface of the brick walls and can be used on both your house or garden walls and agitated to get in between the pitted surfaces, especially in areas with stubborn stains. We then leave it to work its magic for up to 60 minutes.

3

Once the smart solution has penetrated the surface, we'll thoroughly rinse the walls and apply a smart clean sanitizer to leave your walls looking and feeling fresh and restored.

4

We recommend annual maintenance of your brickwork to keep it clean and maintained to avoid costly repair bills further down the line. Our annual package also includes an application of anti-fungal wash to prevent spores

5

We only use the absolute best sealants to protect your property.

Our Brick & Masonry Sealer is a water-resistant coating that protects your walls from damp, whilst our Smartseal Brick Sealer is clear, solvent free, breathable, impregnating coating system. It cleverly alters the chemical structure of the surface to provide an excellent water repellent and stain resistant surface.

Dry walls are essential if you want to avoid long-term damp and damage. We use a Masonry Protection Cream to protect against water penetration and the spread of damp in masonry and brickwork. The cream fills the porous voids within the substrate without blocking them, allowing the surface to release trapped moisture preventing a build-up of damp.

Did you know... Dry damp proof walls will also increase the thermal efficiency of your property. This can produce energy savings from an average of 6% to as much as 29%!

SUPER HYDROPHOBIC WALL & ROOF COATINGS. WE ONLY USE THE BEST.

As a respected and ethical exterior home cleaning company, we only use products of the highest quality that offer the maximum possible protection for your walls and roofs.

WATER REPELLENT SEALANT FOR ADDED PROTECTION

Water can be very damaging for the walls and roof of your home. It's important to keep your walls and roof dry, as this will improve the thermal efficiency of your home and help to prevent heat loss caused by damp surfaces.

We use a water repellent coating that is manufactured utilising the very latest nano technology, designed to minimise moisture ingress in mineral building surfaces such as clay, natural stone, slate and terracotta.

An application of the water repellent clear coating will react and bond to the surface of the wall or roof and prevent rainwater from being absorbed. Instead, water beads will form and simply run off the surface to keep them dry. This will extend the life span of your roof tiles and other mineral building surfaces by slowing down the deterioration caused by water ingress.

CLEAR, BREATHABLE DEFENCE FOR YOUR PROPERTY

The water repellent sealant we use dries clear, so there is no change in the appearance of the surfaces we treat. It's also a very breathable sealant, which does not block the pores of the surface and therefore allows air and moisture to escape.

SELF-CLEANING PROPERTIES

Any treated surfaces remain looking clean and fresh for longer. Dirt and debris are simply washed away during rainfall. Also, the growth of unsightly moss, algae and lichens is restricted, making your property look more appealing too.

HIGHLY BREATHABLE, SELF-CLEANING MASONRY CREME. WE ONLY USE THE BEST.

As a trusted and ethical exterior home cleaning company, we only use products of the highest quality that offer the maximum possible protection for your home.

PROTECTION AGAINST THE ELEMENTS

A dry house is a protected house. Should the walls of your property get damp from the worst the British weather can throw at them, it will decrease the thermal resistance of the walls which can contribute to heat loss and higher energy bills – and that's not good news for anyone.

The masonry creme we use is designed to repel water and keep your brickwork dry. And by coating your walls with this impressive sealant it can help to reduce energy waste caused by wet walls. Independent tests have shown that brickwork treated with this superior quality masonry creme were significantly more energy efficient than untreated ones.

Our masonry crème is also designed to stop damp penetrating, reduce structural damage caused by sulphates and minimise cracking of the material due to frost.

ALLOWS YOUR WALLS TO BREATHE

It's important that the walls of your home can breathe. Unlike some of the stone and brick sealing products on the market, the masonry crème we apply does not block the pores of the masonry and allows air to circulate to keep your walls healthy.

SELF-CLEANING PROPERTIES

Once treated with our masonry crème, your walls will remain clean and fresh looking. Dirt will simply wash away with rainfall and the lack of moisture in the stone or brickwork will hinder the growth of moss, lichen and algae. Your walls will look good for longer. Much longer. Let Purple Wellies apply masonry crème to your property and protect your home from the damaging effects of the weather and give yourself peace of mind.
